

Task 1 : Load Data From CSV

Code 1. Write a Python program to load the data from a given csv file into a dataframe and print the shape of the data, type of the data and first 3 rows.

Task 2 : Data analysis

Code 2. Write a Python program to print the keys:

number of rows-columns, feature names and the description of the data.

Code 3. Write a Python program to get the number of observations, missing values and nan values.

Task 3 : Visualization of Data

Code 4 : Write a python program to create a Bar chart, line chart, and scatter chart to get the frequency of the class of dataset.

Code 5: Write a python program to create a Pie chart to display proportion of each class in the target variable 'Outcome'.
